Re: Reference for Forefront Energy

To Whom It May Concern,

Aztec Engineering has worked with Forefront Energy for a number of years and would highly recommend them. Forefront Energy is made up of knowledgeable and practical people. They understand the core values of the oil and gas industry as demonstrated by their streamlined off-grid power solution that combines clean solar with reliable and serviceable backup power while going above and beyond with on-demand transparent analytics.

Forefront Energy is attentive and adaptable with an attitude for getting the job done right if it means pivoting to a custom design for the needs of the client. We've seen a few different configurations of their power system as they adapt to the evolving demands within and throughout different projects.

The people at Forefront Energy are committed to delivering the highest quality of customer service and approach every interaction with an attitude to improve and exceed expectation. They offered to do a site visit (free of charge) on a weekend to ensure the location of their power generation unit would be unincumbered by the trees surrounding the lease. This site visit found an issue that was not initially caught. It led to a layout change of the site that ultimately led to a better installation. We believe they are not just a company who wants to sell you a product, they genuinely care about the success of each project.

Forefront Energy stands out not only for their desire to sell a product but for their genuine commitment to the success of each project. Their products are competitively priced and characterized by their reliability, performance, and straightforward design.

We concur with these sentiments and, given their exceptional customer service, eagerly anticipate future projects with Forefront Energy.

Sincerely,

Sr. Electrical Engineer
